

TO WHOM IT MAY CONCERN

I hereby send you a recommendation letter for Aditya Rachman Putra, in joining Artificial Intelligent Master Programme in University of Amsterdam. I am a lecturer in Electrical Engineering Programme in ITB where he became one of our students.

I have known Adit since his final year of bachelor degree as his thesis advisor titled “Implementation of Hazardous Chemical Gas Monitoring System Unmanned Aerial Vehicle (UAV)”. As his supervisor, I have had an opportunity to observe him and his team’s participation and performance. Adit showed high adaptability and strong drive to learn new subjects, it can be seen in his eagerness to experiment new technology and tools to solve problems faced during his thesis. He also showed his high responsibility and capability in time management as he participated in several competitions while working on his thesis project while maintaining the progress of both works. Aside from that he took one of the class that I taught at that time, Fundamentals of Intelligence System and Control (4 credits), in which he showed great interests. he achieved excellent result evidenced by his grade.

Adit is a person with high curiosity and strong drive in learning in every tasks that’s given to him. It is mirrored by his Cum Laude predicate gained after finishing his Bachelor Degree last October 2016. This characteristic may have been nurtured since the start of his University year, where he was awarded as one of the best academic student in his faculty.

His interest in academic field was shown in his eagerness to take opportunity as teaching assistant in discrete mathematics course, then research assistant in Microelectronics laboratory later In the same year. He also participate as Laboratory assistant, helping his junior Problem Solving Using C laboratory, also in Microprocessor System laboratory.

To conclude, the reasons I recommend Adit are because he has strong drive to learn, eagerness and courage to jump in and try something new. It is evident in his progress while working on his thesis. Even when not every experiment with new technology and different approach may success, he tried and learnt from his attempt. The relentlessness and teamwork of the team (thesis team) lead them to finish their thesis, and later publish and present the research in International Conference.

Bandung, 19 January 2018

Sincerely Yours,

(Prof. Dr. Ir. Bambang Riyanto Trilaksono, M.Sc.)
